

Hull Partners LLC (“HP”) last week announced the issuance of US Patent No. 11,186,789, which relates to biodiesel fuel mixtures. The patent covers certain biodiesel blends, including B20, and the associated benefit in reducing criteria pollutants such as smog precursors and black smoke. California Fueling’s Chief Operating Officer and Hull Partners Vice President, Yvette McDuff, commented that “our first patent was secured after four (4) years of hard work and firmly establishes Hull partners as the technology leader when it comes to mitigating emissions from biodiesel blends”. Biodiesel’s negative impact on NOx can be avoided using HP’s intellectual property. All questions or interest in HP’s intellectual property should be directed to pat.hullpartners@gmail.com.
