HULL PARTNERS, LLC FILES FOR VESTA™ PATENT COVERAGE

Hull Partners, LLC has filed a suite of patents covering the use of VESTA™ in biodiesel and distillate blends resulting in significantly improved emissions, specifically the reduction of particulate and nitrous oxide criteria pollutants.

Hull Partners, LLC's President, Pat McDuff, commented that "we have discovered a proprietary biodiesel blend that effectively reduces NOx and particulate matter levels, 2% and 22% respectively." This fuel is expected to be particularly useful in California to meet the state's Low Carbon Fuel Standard. Hull Partners will be licensing the VESTA™ technology to California Fueling, LLC who will be responsible for manufacturing.

As separately reported by the National Biodiesel Board¹, "New Additive Hands Biodiesel the Win as Cleanest Liquid Fuel in the U.S. ,... The California Air Resource Board announced on July 20, 2017 that it has certified a biodiesel additive [VESTA™ 1000], that will make B20 blends in California the cleanest proven and tested diesel fuel with the lowest emissions profile available anywhere in the U.S."

VESTA™ 1000's commercial roll out will begin sometime in Q4 2017 with a clear objective to enable up to B20 blends by January 1, 2018 which is in line with the California Air Resources Board's implementation of the Alternate Diesel Fuel Regulation and the associated NOx mitigant requirements.

For more information on VESTA™ 1000 visit www.californiafueling.com or contact Pat McDuff at 303-618-5310.
